Combo Wear FC

Description: High-tech, epoxy compound for quickly repairing processing equipment and returning to service in as little as 1.5 hours

Intended Use: Repair large cracks in large coal fuel lines; protect pipe elbows, exhauster fans and housings; repair chippers, bins, and hoppers

Product features:
- Bonds to wet surfaces
- Excellent adhesion to metal, ceramic, and concrete
- Reinforced with two bead sizes and silicon carbide

Limitations: None

Technical data should be considered representative or typical only and should not be used for specification purposes.

Cured 7 days @ 75° F
- Adhesive Tensile Shear: 1,450 psi
- Coefficient of Thermal Expansion: 34 [(in.)/(in. x °F)] x 10(-6)
- Color: Grey
- Compressive Strength: 11,000 psi
- Coverage/lb: 50 sq. in./lb. @ 1/4"
- Cured Hardness: 87D
- Cured Shrinkage: 0.0008 in./in.
- Dielectric Constant: 41.0
- Flexural Strength: 7,140 psi
- Full Cure: 6 hrs
- Functional Cure: 2-3 hrs.
- Mix Ratio by Volume: 2:1
- Mix Ratio by Weight: 2:1
- Mixed Viscosity: Non-sag putty
- Pot Life @ 75F: 7 min.
- Recoat Time: 1 - 2 hrs.
- Solids by Volume: 100
- Specific Gravity: 2.03 gm/cc
- Specific Volume: 13.6 in.(3)/lb.
- Temperature Resistance: Wet: 140°F; Dry: 300°F
- Tensile Strength: 4,300 psi

Surface Preparation:
1. Thoroughly clean the surface with Devcon® Cleaner Blend 300 to remove all oil, grease and dirt.
2. Grit blast surface area with 8-40 mesh grit, or grind with a coarse wheel or abrasive disc pad, to create increased surface area for better adhesion (Caution: An abrasive disc pad can only be used provided white metal is revealed). Desired profile is 3-5mil, including defined edges (do not “feather-edge” epoxy).
3. Clean surface again with Devcon® Cleaner Blend 300 to remove all traces of oil, grease, dust or other foreign substances from the grit blasting.
4. Repair surface as soon as possible to eliminate any changes or surface contaminants.

TESTS CONDUCTED
- Compressive Strength ASTM D 695
- Cured Hardness Shore D ASTM D 2240
- Coef. of Thermal Expansion ASTM D 696
- Dielectric Constant ASTM D 150
- Flexural Strength ASTM D 790
- Thermal Conductivity ASTM C 177
- Adhesive Tensile Shear ASTM D 1002
- Cure Shrinkage ASTM D 2566
- Dielectric Strength, volts/mil ASTM D 149
- Modulus of Elasticity ASTM D 638

Note: For metals exposed to sea water or other salt solution, grit-blast and high-pressure-water-blast the area, then leave overnight to allow any salts in the metal to “sweat” to the surface. Repeat blasting to “sweat out” all soluble salts. Perform chloride contamination test to determine soluble salt content (should be no more than 40ppm).

Working Conditions: Ideal application temperature is 55°F to 90°F. In cold working conditions, directly heat repair area to 100-110°F prior to applying epoxy and maintain at this temperature during product cure to dry off any moisture, contamination or solvents, as well as to achieve maximum performance properties.
Mixing Instructions:

---- It is strongly recommended that full units be mixed, as ratios are pre-measured. ----

1. Add hardener to resin.
2. Mix thoroughly with screwdriver or similar tool (continuously scrape material away from sides and bottom of container) until a uniform, streak-free consistency is obtained.

INTERMEDIATE SIZES (1,2,3 lb. units): Place resin and hardener on a flat, disposable surface such as cardboard, plywood or plastic sheet. Use a trowel or wide-blade tool to mix the material as in Step 2 above.

LARGE SIZES: (25 lb., 30 lb., 50 lb. buckets): Use a T-shaped mixing paddle or a propeller-type Jiffy Mixer Model ES on an electric drill. Thoroughly fold putty by vigorously moving paddle/propeller up and down until a homogenous mix of resin and hardener is attained.

Application Instructions:

ADDITIONAL SURFACE PREPARATION INFORMATION:
If grit blasting is not possible, and expandable metal cannot be used, apply Devcon Brushable Ceramic at 11-18 mils to prime the metal surface. Allow to cure for approximately 2 hours, or until a fingernail can almost depress the primed surface. Immediately apply Combo Wear FC to the surface. DO NOT let the "prime coat" fully cure before applying Combo Wear FC.

Spread mixed material on repair area at a minimum thickness of ¼". Work firmly into substrate to ensure maximum surface contact. Combo Wear FC fully cures in 16 hours, at which time it can be machined,drilled, or painted.

FOR BRIDGING LARGE GAPS OR HOLES
Place fiberglass sheet, expanded metal, or mechanical fasteners between repair area and Combo Wear FC prior to application.

FOR VERTICAL SURFACE APPLICATIONS
Combo Wear FC can be troweled up to 3/4" thick without sagging.

FOR MAXIMUM PHYSICAL PROPERTIES
Cure at room temperature for 2.5 hours, then heat cure for 4 hours @ 200°F.

FOR ±70°F APPLICATIONS
Applying epoxy at temperatures below 70°F lengthens functional cure and pot life times. Conversely, applying above 70°F shortens functional cure and pot life.

Storage:
Store at room temperature, 70 °F.

Compliances:
None
