

Batch Mixing Simplified: Fully Automated for Working Smarter with Easy Plug & Play Assembly

With the High Performance Twin-Shaft Mixer, streamlining grouting operations is of the utmost importance. Increase efficiency and reduce complexity in many ways. Enhance performance with easy-to-use, proven technology and robust twin shaft mixing to ensure homogeneous quality. Boosting productivity with high capacity output will enable you to be more dynamic and more reactive.

High Productivity with Uniform High Quality

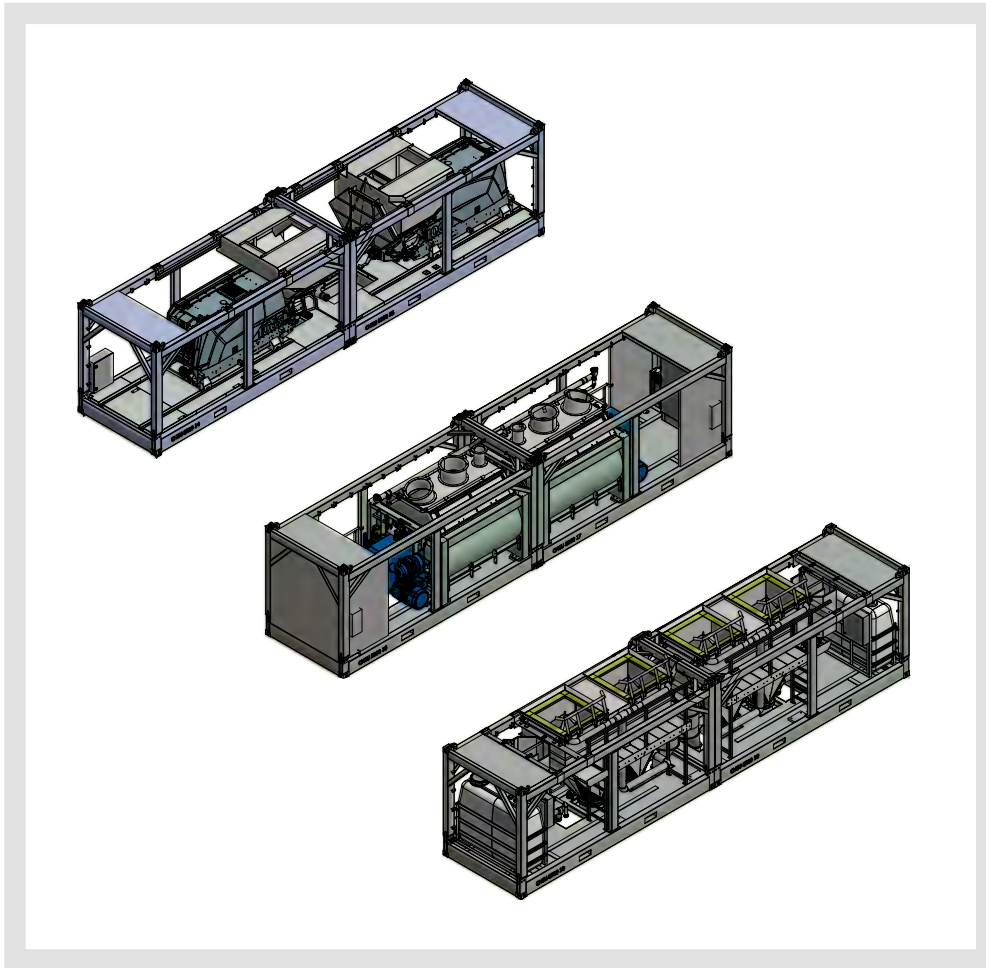

- Batch mixing
- Capacity up to 96 t/h*
- Crane free solution with cutting edge elevator system
- Simultaneous loading and mixing system
- Mixer capacity 2 x 6 ton/per mix
- Pump capacity approximately 40m³/h

Intelligent Design

- Computerized PLC controlled
- Plug & play assembly
- Compact 20-foot DNV 2.7.1 approved containers & frames
- Small footprint – saving valuable vessel deck space
- Dust free
- Easy assembly and disassembly for quick mobilization and demobilization

* Foundation grout inlet needs to be aligned with the equipment to achieve full output capacity

Batch Mixing Simplified: Fully Automated for Working Smarter with Easy Plug & Play Assembly

Increase efficiencies through crane-free big bag loading by using the on deck hopper and elevator system.

With the dust collection and filtration systems, a dust-free work environment allows for better and safer environment and a cleaner surrounding area.

Fully electric spread ensures noise and emission reductions.

The completely automated dosing and mixing ensures consistent, high quality batches – every batch.

Self-cleaning mixer for ease of use and lower maintenance.

With low maintenance and highly robust components, teams rely on this equipment for continuous operation without breakdowns.
